Available immediately

SUMMARY

DevOps Engineer with 1+ year of experience building and running AWS serverless and containerized (Docker, Kubernetes) production systems with Terraform, CI/CD, and Prometheus/Grafana monitoring. Familiar with GCP, Azure (AKS, ACR, Azure DevOps), and Helm. Also have 2 year experience in delivering full stack web projects .Available immediately.

EDUCATION

Bachelor of Technology, Computer Science Engineering – Rajadhani Institute of Engineering and Technology *2022 – 2026*

CGPA – 7.8

PROFESSIONAL EXPERIENCE

DevOps Engineer – Tuneslogic LLC , Carmel, Indiana,USA *May 2025 - Present*

- Design, deploy, and maintain serverless application infrastructure on AWS, using Lambda for event-driven compute, DynamoDB for scalable NoSQL data storage, Cognito for authentication and user-pool management, and S3 for object storage and static asset hosting.
- Manage CI/CD pipelines, server provisioning, and deployment workflows across AWS EC2 and serverless resources, ensuring high availability and smooth delivery of production services.
- Containerized backend and internal services using Docker and orchestrated deployments with Kubernetes; set up monitoring and observability dashboards using Prometheus and Grafana.
- Developed and maintained Python-based backend automation scripts and services on AWS Lambda, improving internal tooling and operational efficiency.
- Collaborated with backend developers on Django-based microservices and AWS serverless components, handling containerization, environment configuration, IAM permissions, and infrastructure monitoring.
- Currently building Bracketoro, a real-time sports tournament management and live scheduling platform, covering tournament/bracket setup (Round Robin, Single/Double Elimination), a live court allocation and scoring dashboard, and a mobile-responsive public schedule hub for live scores, standings, and bracket tracking.
- Built the Bracketoro frontend using React 19, Vite, and TypeScript with React Router v7, Redux Toolkit, and Tailwind CSS/Material-UI (MUI v7), and integrated AWS Amplify with Cognito for authentication and DynamoDB/AppSync for real-time data sync; used D3.js and react-d3-tree for interactive bracket visualizations.
- Used Docker to containerize Bracketoro services and Kubernetes for orchestration, with Prometheus and Grafana for monitoring and dashboarding.

Interior Graphic Designer – Calhin Media Group, Attingal *March 2025*

- Reduced project turnaround time from 12 hours to 5 hours per project by designing and delivering rapid, high-quality 3D interior visualizations using Blender.
- Increased project acquisition rate by producing visually engaging 3D interior models that enabled the company to serve more clients within tighter deadlines.

Freelance Web Developer (3D Website Design) – Brandbook, Calicut *September 2024*

- Designed and developed a fully interactive 3D website using React.js, Three.js, and WebGL, implementing 3D model integration, animations, and interactive UI elements for brand storytelling.

PROJECTS

GeneSage – AI Genomic Analysis and Disease Prediction System

- Built an end-to-end deep learning pipeline that processes FASTA DNA sequences through preprocessing (one-hot encoding, k-mer embeddings), a MultiScaleCNN with four parallel kernel branches, a 12-layer Transformer encoder, BiLSTM, and attention mechanism for multi-class disease prediction.
- Achieved 94–96% disease prediction accuracy with AUC-ROC of 0.8672 and AUPRC of 0.9107 on ClinVar/NCBI datasets, evaluated using MCC (~0.85), Precision, Recall, F1, and Confusion Matrix.
- Integrated PharmGKB-based drug recommendations, SHAP-based explainable AI (XAI), and a Digital Twin simulation module; deployed via a React frontend and Django REST Framework backend.

- Developed using PyTorch and scikit-learn; paper under review targeting Frontiers in Systems Biology.

Intelligent Healthcare Operations & Patient Risk Platform – Academic Project

- Built a hospital operations platform managing patients, appointments, doctors, lab results, resources, and emergency cases, with patient risk scoring and emergency-priority classification.
- Developed Angular/TypeScript dashboards and a .NET Web API backend, using SQL Server for structured data and MongoDB for clinical records and event data.
- Containerized the Angular frontend, .NET API, and databases with Docker (multi-stage builds) and packaged the services as a Helm chart.
- Provisioned an Azure Kubernetes Service (AKS) cluster and Azure Container Registry (ACR) with Terraform, and deployed the platform to AKS.
- Automated build, image push to ACR, and Helm deployment with an Azure DevOps CI/CD pipeline.
- Implemented role-based access control, audit trails, and REST integrations with external hospital and lab systems, using Git-flow version control.

RESEARCH & PUBLICATIONS

Paper Presentation – National Expo, Women's College Trivandrum

- Presented research on AI-powered genomic analysis and disease prediction (GeneSage) at a national-level technical exposition held at Women's College, Trivandrum; received recognition for innovation in applied AI and bioinformatics.

Research Paper – Under Review

- Manuscript on the GeneSage deep learning pipeline for multi-class genomic disease prediction is currently under review, targeting Frontiers in Systems Biology.

OPEN-SOURCE CONTRIBUTIONS

- Contributor at Uiverse.io: Developed a responsive Dark/Light mode toggle button UI component featuring background image transitions and animated knob color shifts.
- Published 'decrypt-text' npm package offering reusable text animation UI components optimized for seamless integration in JavaScript and React-based projects.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, C, SQL

Cloud & DevOps: AWS Lambda, DynamoDB, Cognito, S3, EC2/IAM, Terraform, Modal, Docker, Kubernetes, Prometheus, Grafana, CI/CD Pipelines, Git

AI/ML: PyTorch, scikit-learn, YOLOv7/v8, DeepSORT, Transformers, CNNs, LSTMs, SHAP

Frontend: ReactJS, Angular, Three.js, WebGL, HTML, CSS, Bootstrap

Backend & API: .NET Web API, Django, Django REST Framework, Django Channels, FastAPI, Node.js, Flask, REST

Databases: SQL Server, MongoDB, DynamoDB

Tools: Blender, Tesseract, EasyOCR

CERTIFICATIONS & AFFILIATIONS

- NSDC Skill Certificate – Python Full Stack Development
- IEEE Student Member, 2025 – May 2026
- ICFOSS Contributor, 2025 – May 2026
- CSI Vice Chairman, 2025 – May 2026; organized multiple inter-collegiate debate competitions

LANGUAGES & INTERESTS

Languages: Malayalam (Native), English, Tamil

Interests: Cycling, Movies, Cooking, 3D Animation
